

Compounded GLP-1 Medications for Sublingual Administration

Dear Prescriber:

GLP-1 medications, such as SEMAGLUTIDE and TIRZEPATIDE, have taken the world by storm for a number of reasons including Type 2 Diabetes, Weight Loss and others as shown by a review of the literature available on the internet or at www.clinicaltrials.gov.

With respect to the many different compounding processes being utilized and the marketing of these compounded medications, from my perspective, it is like the wild, wild west. Some pharmacies are compounding using questionable ingredients or processes, others are not respecting the patents/trademarks held by Novo-Nordisk A/S and Eli Lilly and Company, and some businesses promote "no prescription needed" on social media platforms -- it is very scary. In my clinical opinion, all of these put a prescriber at risk if he/she prescribes something that is in the "questionable" arena.

For these reasons, I encourage you to scan the QR code or go to www.subsema.com to learn more about compounded GLP-1 medications. The videos and links found there are very informative.

I am pleased to let you know that NextGenRx Pharmacy is able to provide the compounded sublingual approach discussed at www.subsema.com to patients anywhere in our service area.

We believe this sublingual approach will resonate with interested parties and we are happy to serve your patients if you believe they could benefit from this compounded medication. If this is of interest to you, please email me directly at dj.lees@mynextgenrx.com or call the pharmacy at 918.578.0031 and I, or one of our staff, will follow up.

Sincerely,
